# PROBLEM STATEMENT

Customer churn is a major problem for the e-commerce platform:

- Churn hurts profits, reputation, and growth.
- A data-driven solution is required to identify early signs of churn.
- Personalized customer experiences are needed to keep customers engaged.

# PROJECT OVERVIEW

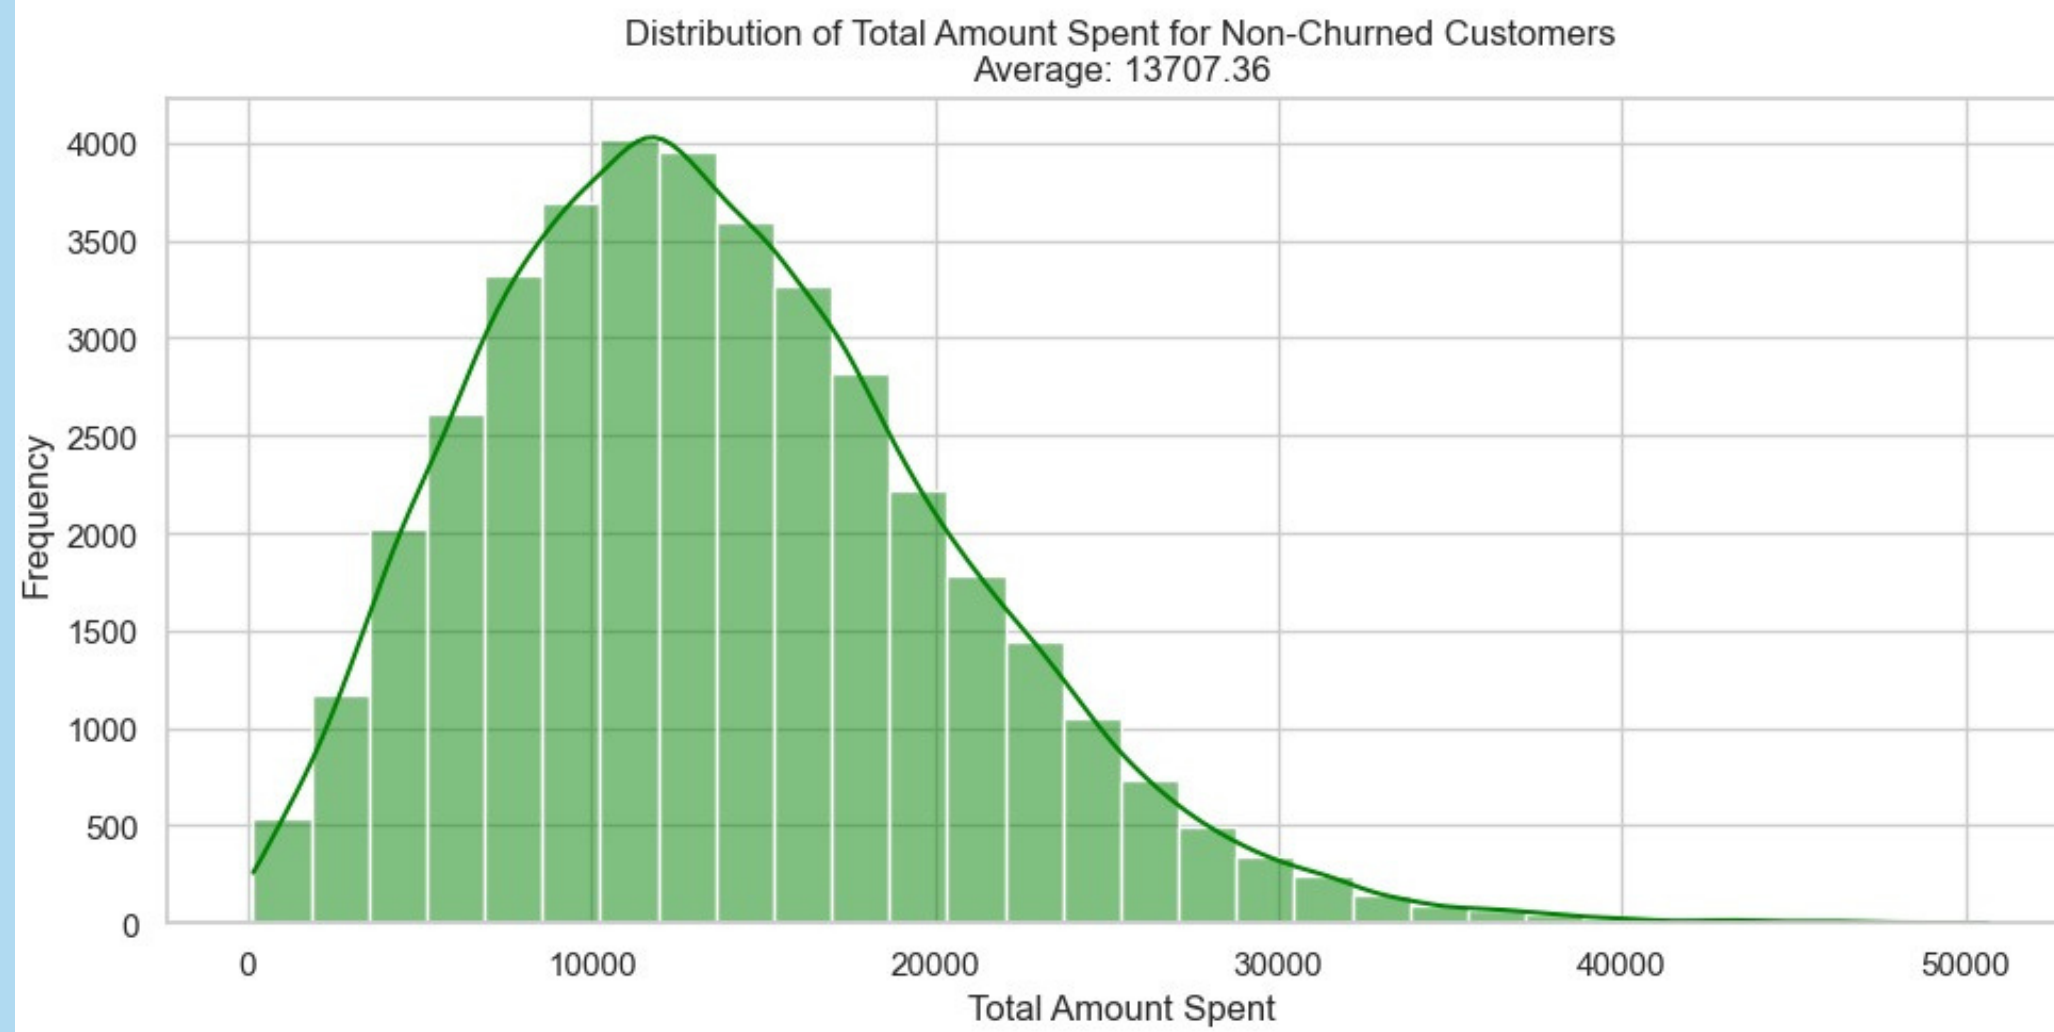

Developing a Churn Prediction Model for an e-commerce platform to address the challenge of customer disengagement.

# BUSINESS QUESTIONS

1. Which **customer features** are most indicative of a potential churn?
2. Which **consumer behaviors** are most indicative of a potential churn?
3. How impactful are the **products returned** to the customer churn or retention?

**Customer Feature - Gender Churn Rate**

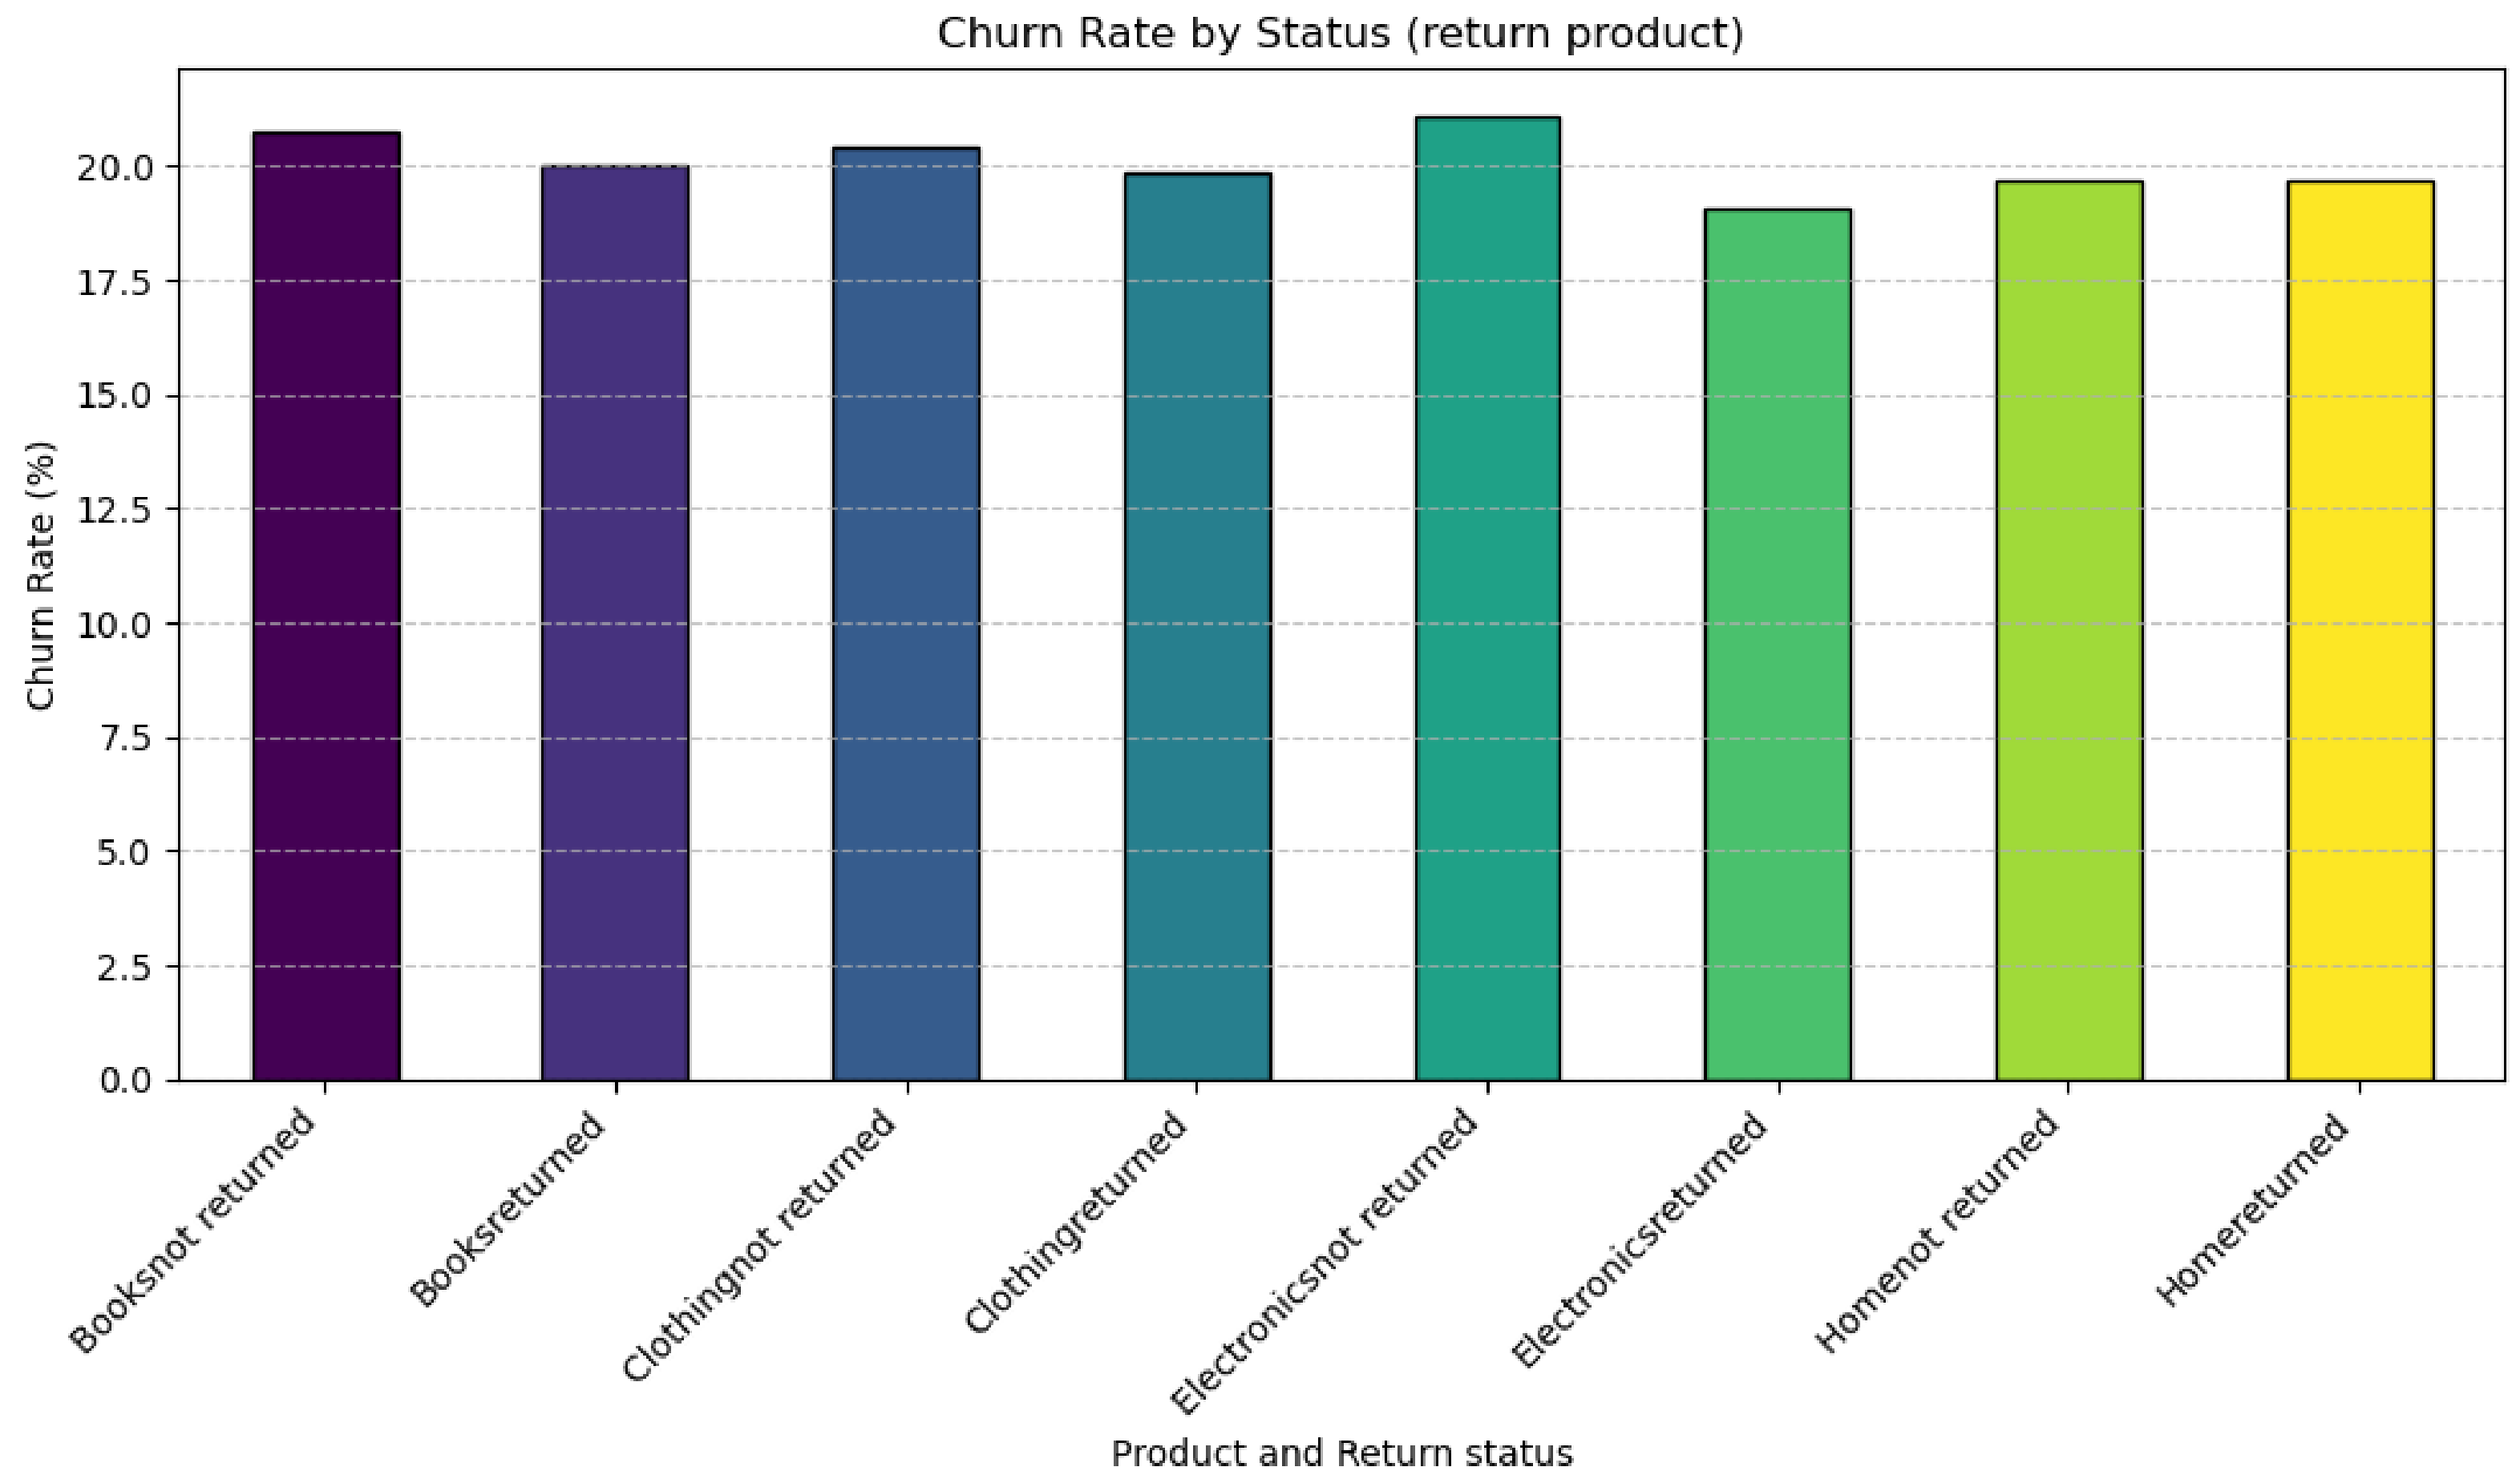

**Customer Feature - Age Churn Rate (Old >40)**

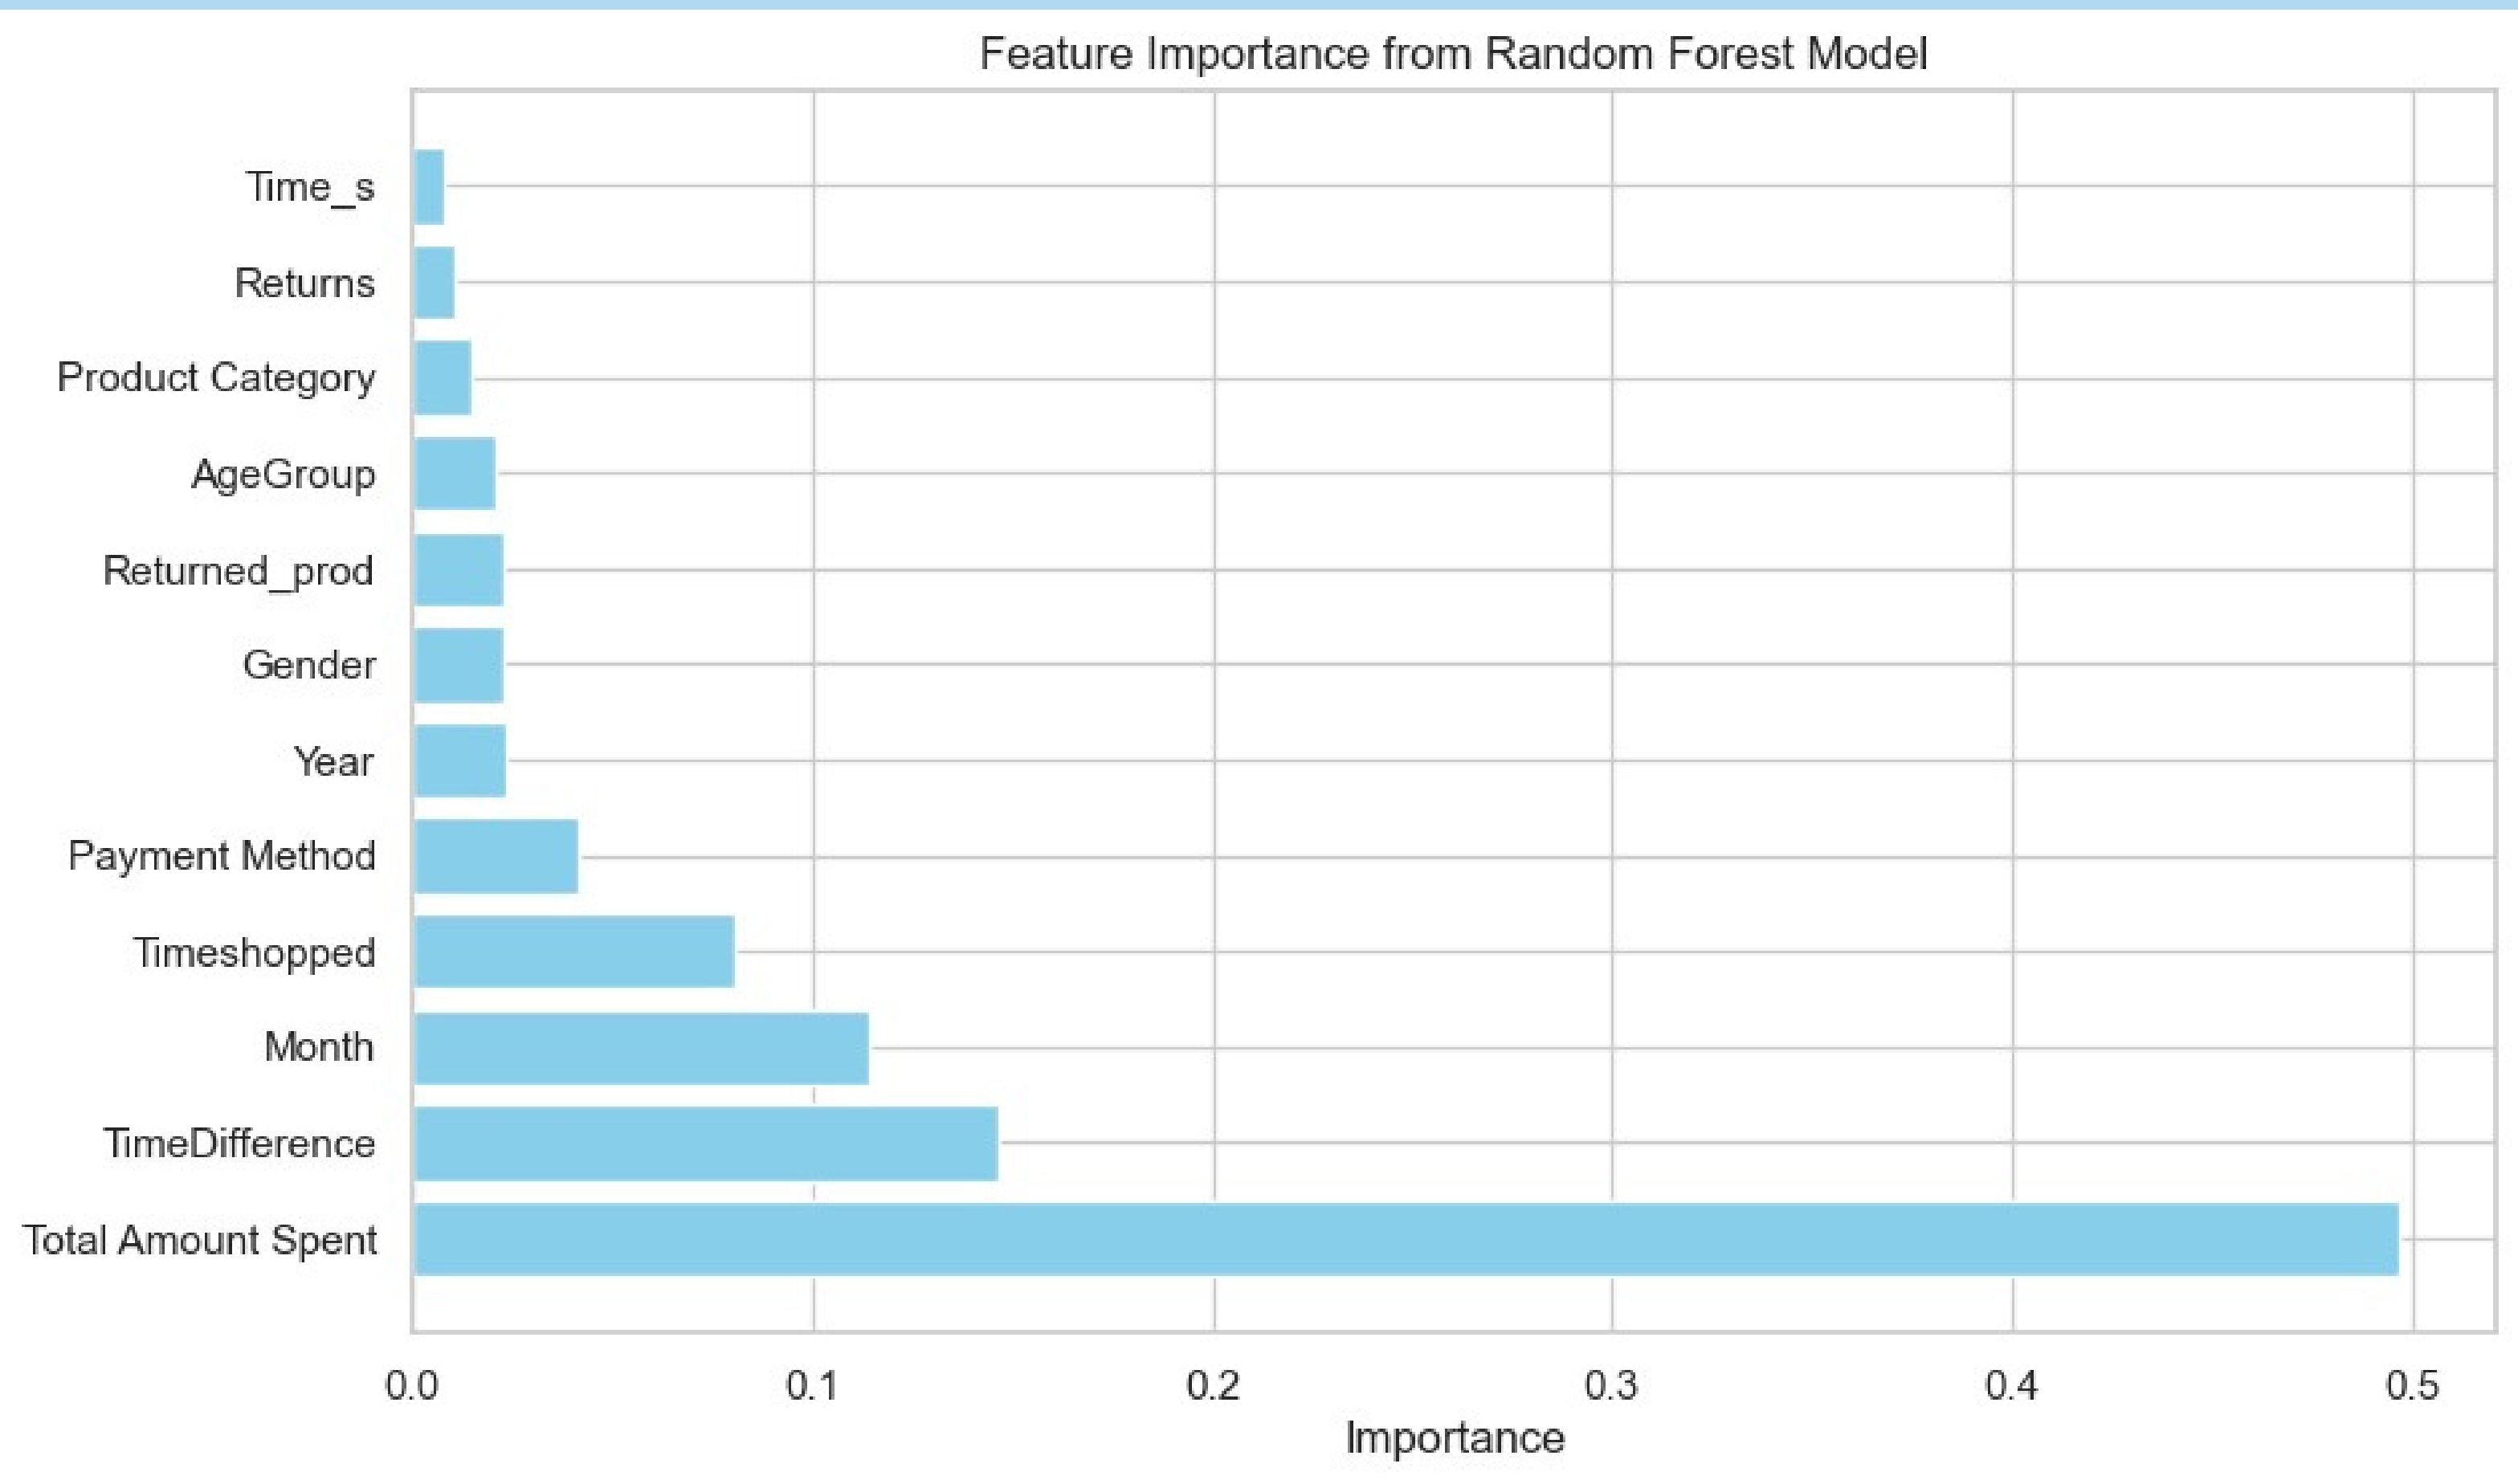

## Consumer Behaviour - Time Spent

**Product Return - Comparative Analysis.**

**Feature Importance - By rank**

# RECOMMENDATIONS

1. Targeted campaigns and feedback surveys (Older and Male customers).
2. Incentives (New and big spenders).
3. Feedback survey on returned products.

# **NEXT STEPS**

- 1. Customer segmentation (Spending, Customer behavior).**
- 2. Data Acquisitions.**

**Q&A**
